

# The Effects of **STRESS** on your Body

INSPIRED EXECUTIVES  
Masterful Coaching & Consulting

**SKIN:** pales as blood diverted to vital organs.

**HEART:** begins to pound, sending blood around body carrying sugar (energy) and hormones (e.g. adrenalin)

**SKIN:** less blood supply can lead to diseases developing.

**HEART:** racing heartbeat and high blood pressure can lead to strokes or heart attacks.

**MUSCLES:** tense in readiness for action.

## PRIMARY STRESS RESPONSE

IMMEDIATE & URGENT RESPONSE to SERIOUS THREAT

**LUNGS:** air passage dilates, breathing more intense to provide more oxygen to feed increase blood supply.

**BLOOD:** thickens to help it carry more oxygen, fight infection & stop bleeding

**SWEAT GLANDS:** start up to cool the underlying and overheated muscles.

**LIVER:** glycogen converted to blood sugar to give 'short distance' energy.

**DIGESTION:** processes shut down as blood diverted elsewhere. Mouth goes dry to avoid adding extra fluids to stomach.

**BLADDER & RECTUM:** Muscles relax to release any excess load.

**MUSCLES:** ongoing tension leads to aches & pains, even muscle strain.

## SECONDARY STRESS RESPONSE

ONGOING RESPONSE to UNDEALT WITH STRESS

**LUNGS:** super-oxygenated blood can lead to blackouts and upset heart rhythms.

**BLOOD:** heart works harder due to thickened blood.

**CHOLESTEROL:** high cholesterol in blood can cause hardening of the arteries.

**LIVER:** body's own fats and proteins broken down and released to provide further energy.

**DIGESTION:** shutdown can lead to stomach problems, particularly if you eat on the run. Increase in acidity can contribute to stomach ulcers.

## WARNING SIGNS:

Below are some of the messages our bodies send to tell us we're stressed.

**KEY:** Early Warning Signs, *Secondary Stress Signs in italics*

### PHYSICAL SYMPTOMS

- Muscle tension / headaches
- Sleep disturbance / tiredness
- Increased 'breakouts'
- Rapid pulse
- Nausea
- Indigestion
- Increased sweating
- Flushing (face feeling hot)
- *Prolonged / frequent headaches*
- *Susceptibility to mild illness*
- *Dizziness / faintness*
- *Breathlessness / Chest Pain*
- *Ongoing Nausea / Stomach ache*
- *Ongoing fitful sleep*

### BEHAVIORAL SYMPTOMS

- Appetite changes / compulsive eating
- Impatience, carelessness, hyperactivity
- Poor productivity / low energy
- Avoidance of situations / places
- Change in sleeping patterns
- *Increased alcohol, cigarette and drug use*
- *Increased absenteeism, aggression, irritability*
- *Sudden tears*

### EMOTIONAL SYMPTOMS

- Anxiety / sadness
- Moodiness / grumpiness
- Loss of sense of humor
- Withdrawal / feeling of isolation
- Low self-esteem
- Feelings of guilt and shame
- *Extreme anger (over-reaction)*
- *Loss of libido*
- *Overwhelming feeling of panic / anxiety*

### COGNITIVE SYMPTOMS

- Inability to make decisions or muddled thinking
- Reduced co-ordination / creativity
- Becoming more vague / forgetful
- Negative 'globalization'. Everything seems to go wrong / is bad
- Fear of rejection / defensiveness
- Rushed decisions
- Over-sensitive to criticism
- *Poor concentration*
- *Negative self-talk / fear of failure*
- *Feelings of 'unfairness'*
- *Can't switch off*
